

EXPERIMENT – 6

Design and Development using **RAD (Rapid Application Development) Model**

Aim:

To design a prototype of an application using the **Rapid Application Development (RAD)** methodology by identifying requirements, creating user interface designs, and developing interactive prototypes with continuous feedback.

Objective:

- To understand the RAD model phases
- To design a user-centric application prototype
- To implement iterative development using UI/UX tools

Tools Used:

- Axure (for wireframing and prototyping)
- Figma (for preview, testing, and collaboration)

Procedure:

Phase 1: Requirements Planning

- Identified system requirements and user needs
- Defined key features such as:
 1. Home page
 2. Product categories
 3. Product listings
 4. Product details
 5. Cart
 6. Checkout
 7. Order confirmation
- Identified user actions:

1. Browsing products
 2. Searching
 3. Adding items to cart
 4. Checkout process
 5. Order tracking
- Created requirement specifications:
 1. View product categories
 2. View products under categories
 3. View product details
 4. Manage cart
 5. Perform checkout
 6. View order confirmation

Phase 2: User Design

- Created wireframes and UI prototypes using Axure
- Designed the following screens:
 - Home Page
 - Product Categories
 - Product Listings
 - Product Details
 - Cart
 - Checkout
 - Order Confirmation
- Added:
 - Navigation links
 - Reusable components (header/footer)
 - Annotations for clarity
- Designed interactions using prototype mode

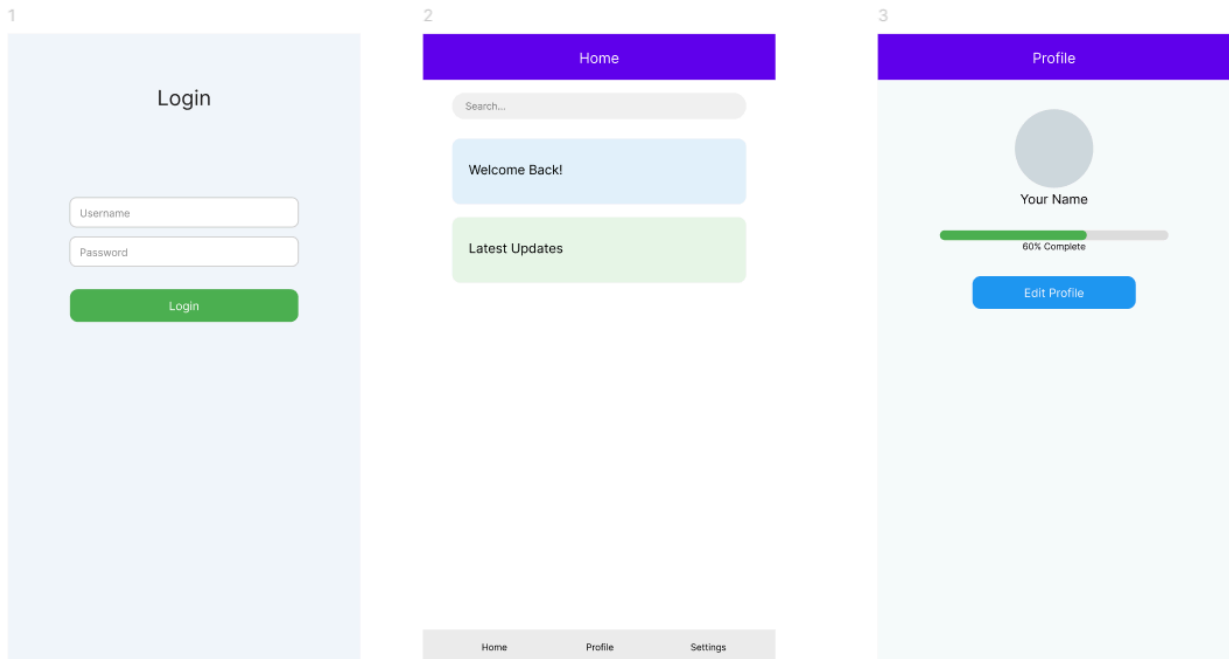

Phase 3: Construction

- Developed interactive prototypes with navigation flow:
 - Home → Categories → Listings → Details → Cart → Checkout → Confirmation
- Added dynamic features:
 - Simulated transitions
 - Modal popups
 - Real-time navigation behavior
- Testing:
 - Previewed prototype in Figma
 - Collected feedback

- Improved UI/UX based on suggestions

Phase 4: Cutover

- Finalized prototype design
- Shared design via Figma for development
- Prepared documentation for developers
- Provided user training and walkthrough
- Enabled collaboration through comments

Result:

The application prototype was successfully designed using the RAD model. The system demonstrated efficient development through iterative design, user feedback, and rapid prototyping, ensuring a user-friendly and functional interface.
